

CSS Fundamentals

LearnHub SonaMilkii — Original Study Notes

Learning Objectives

- Understand selectors and the cascade.
- Use the box model and layout systems.
- Build responsive page designs.

1. CSS

CSS (Cascading Style Sheets) controls the presentation of HTML, including typography, spacing, colors, borders, and layout.

2. Selectors

Selectors choose which elements receive styles. Common selectors include element, class, ID, attribute, and pseudo-class selectors.

3. Box Model

Every element can be understood through content, padding, border, and margin. Understanding these areas makes spacing and sizing easier to control.

4. Flexbox and Grid

Flexbox is useful for one-dimensional layouts. CSS Grid is useful for two-dimensional layouts and page structures.

5. Responsive Design

Responsive pages adapt to different screen sizes using flexible layouts, relative units, media queries, and mobile-friendly design choices.

Summary

CSS separates presentation from document structure and provides powerful tools for responsive, organized layouts.

Practice Questions

- What are the main ideas covered in CSS Fundamentals?
- Which concept was most useful to you, and why?
- Give one practical example of applying what you learned.
