

JavaScript Fundamentals

LearnHub SonaMilkii — Original Study Notes

Learning Objectives

- Learn JavaScript variables, functions, conditions, and loops.
- Understand arrays and objects.
- Learn basic DOM interaction and events.

1. JavaScript

JavaScript is a programming language widely used to add behavior and interactivity to web pages and to build applications outside the browser.

2. Variables and Data

Use variables to store values. Common data types include strings, numbers, booleans, arrays, objects, null, and undefined.

3. Conditions and Loops

Conditional statements allow programs to make decisions. Loops repeat operations over a sequence or while a condition is true.

4. Functions

Functions package reusable logic. Parameters provide inputs and return values provide results.

5. DOM and Events

In the browser, JavaScript can read and change the Document Object Model (DOM). Event handlers respond to actions such as clicks and form submissions.

Summary

Strong JavaScript fundamentals provide the foundation for interactive websites and modern web frameworks.

Practice Questions

- What are the main ideas covered in JavaScript Fundamentals?
- Which concept was most useful to you, and why?
- Give one practical example of applying what you learned.
